

Advantages of PAPERplus® Papillon:

- Papillon is extremely versatile with small footprint.
- The machine offers three different operating modes.
- Multiple positions of the machine allow for easy integration.
- The machine's maximum speed is (130'/min).
- Papillon pads can be used for filling voids or for wrapping.
- The paper pads offer a good spring effect.

Storopack - Perfect Protective Packaging

Wherever in the world you send your products - we want them to be well protected during transport! After all, you invest a great deal in their production: knowledge, time, money and much more. So do you really want to rely on packaging that cannot guarantee your product will arrive safely at its destination?

It is better to trust protective packaging solutions by Storopack. We work with you as a team to develop solutions that are suited perfectly to your individual requirements and are set for the future. Find out more about protective packaging solutions by Storopack at www.storopack.com.

Perfect Protective Packaging

STOROpack

New Top Fill solution - PAPERplus® Papillon

Storopack is introducing a new machine that creates padding to protect small and medium-sized parcels: PAPERplus® Papillon. The machine transforms two 8" wide layers of paper into protective pads. These pads can fit into small areas and can be snuggled between products to ensure good protection and avoid rattling during shipping.

The machine is extremely versatile and features three different operating modes: automatic, on-demand and foot. Multiple positions allow for easy integration into existing Top Fill packaging processes: Floor, Table Top and Table Stand. The machine will generally be used as a "stand-alone" unit, but it can also be used in conjunction with silo and conveying systems to serve multiple packing stations.

The machine is light and compact and can be hand-carried. It measures 13" (L) x 13" (W) x 15" (H). Because of its small footprint it is very easy to integrate in Packing stations. The machine is easy to operate and dispenses the pads directly into the carton thus increasing productivity and Working Comfort®.

The maximum speed is 130'/min. Plug & Play functionality makes it exceptionally user-friendly. It can be used with voltages of either 110 or 230 V at a frequency of 50/60 Hz. The machine weighs 26,5 lbs without paper.

The Paper

The unique shape of the pad is patented. The pads are lightweight and offer good Spring Like effect. They can either be used for filling voids or for wrapping shipping goods. They adjust quickly to the products in the package, therefore ensuring reliable protection of the goods. Moreover, the pads offer a pleasant unboxing experience to the end-customer.
